

While potassium is in tremendous supply within most soils, just a small fraction of one percent is plant available. This means that for most plants a frequent application of soluble, plant available potassium is required to maximize plant growth.

Proper potassium nutrition is critical to plants for water movement, energy production and the activation of enzymes that promote overall plant strength.

The combination of ionic potassium with phosphorus in K&P results in superior plant performance.

Benefits

- Highly efficient potassium and phosphorus fertilizer
- Ultra-low application rates
- Enhances turf strength and resistance to drought and temperature extremes
- Chelated and complexed nutrients enhance overall plant metabolism and growth
- Clean, easy handling solution
- Will not corrode application equipment
- Low impurities
- Liquid formulation for easy handling

Guaranteed Analysis 0-6-12

Total Nitrogen (N).....	0.00%
Available Phosphorus (P2O5).....	6.00%
Soluble Potassium (K2O).....	12.00%
Iron (Fe).....	0.80%
Manganese (Mn).....	0.20%

Derived from: Protein Hydrolysate, Monopotassium Phosphate, Potassium Citrate, Ferrous Sulfate and Manganese Sulfate.

Application Rates

	/100m ²	/hectare
Foliar Application	23.5ml – 47ml	2.35L – 4.7L
Controlled Irrigation	47ml – 93.5ml	4.7L – 9.35L
Soil Spray/ Drench	23.5ml – 70ml	2.35L – 7L
