GENERAL INFORMATION

Quantum-H® can be applied to all turf and ornamental applications including golf fairways and greens, sports turf, warm and cool season grasses, and ornamental gardens, plants, trees, shrubs, and flowers.

DIRECTIONS FOR USE

QUANTUM-H can be applied standalone or in combination with liquid and/or dry fertilizers.

APPLICATION RATES: Apply 50 - 250 liters of **Quantum-H** per hectare. (Preferably 10 - 50 liters applied over multiple applications). It may be water run, side dressed, mixed with soil applied liquid nutrients or sprayed directly on the soil or directly on the turf.

SPRINKLER OR DRIP IRRIGATION: Smaller amounts of **Quantum-H** may be applied in every irrigation instead of only one application. **Quantum-H** is not corrosive to pipes or nozzles and will not plug them. Apply at 10 - 30 ppm for best results.

STANDALONE: When spraying **Quantum-H** alone on the foliage, dilute at least 1:20 in water.

Applications can be applied continuously via irrigation, or every 1 to 3 months as required.

Fertilizers or nutrients with an extremely low pH will cause the humic fraction to precipitate. It will be necessary to agitate your mix to obtain an even distribution of the humic fraction. For best results add water to blends with fertilizers and nutrients with a pH below 2

Quantum-H is compatible with almost all fertilizers and nutrients. If unfamiliar with its use, perform a jar test, mixing each product in the same ratio as to be field applied.

DO NOT APPLY QUANTUM-H WITH PESTICIDES AND HERBICIDES.
