

HydroForce Recovery

Product Overview

HydroForce Recovery is a premium soil surfactant blend, specifically designed to overcome hydrophobic soil situations. **HydroForce Recovery's** key performance characteristics are due to its unique combination of powerful, highest quality surfactant technologies fulfilling rapid soil wetting, reliable re-wetting and plant health improvement performance.

Key Benefits of HydroForce Recovery

- Premium formulation, specifically developed for curative treatment of dry patch.
- A unique blend of two high quality, powerful surfactants, fulfilling specific roles in water penetration, soil wetting and re-wetting.
- High concentration of surfactant. Maximises molecule output and performance.
- Non burn formulation, even at higher temperatures.
- Contains a bio-stimulant package within the formulation, allowing for improved root response and plant recovery.
- Manufactured and developed in Australia for the harshest of climatic conditions.

Packaging

HydroForce Recovery is available in 10L, 20L, 200L and 1,000L pack sizes for convenience and ease of use in every situation.

HydroForce Recovery Performance

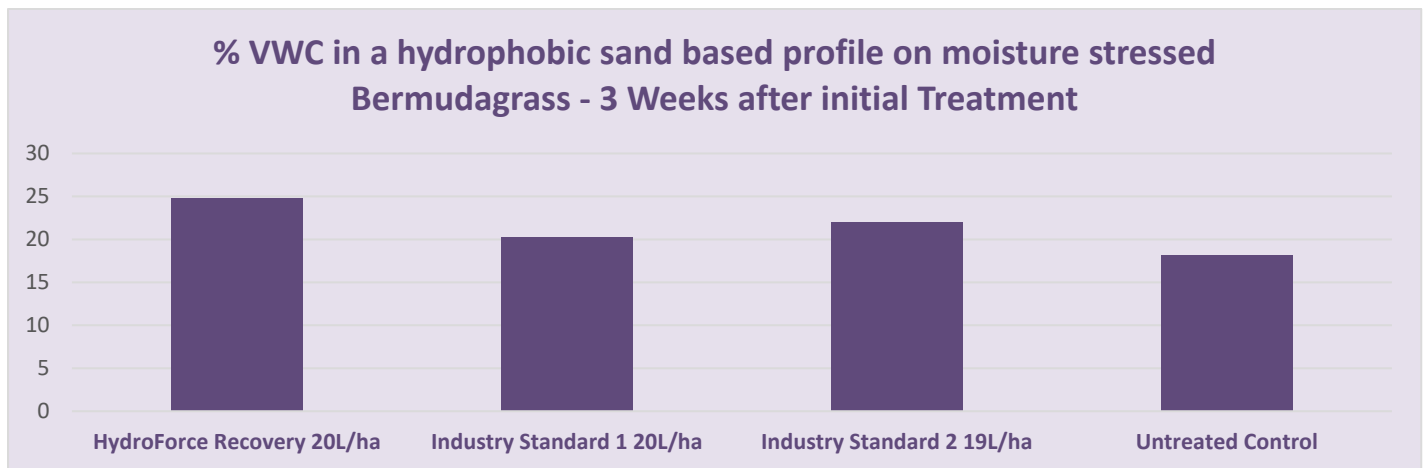

Rapid Wetting Performance

Australian research has proven that **HydroForce Recovery** has exceptional rapid initial wetting qualities. Quick movement of water into the profile allows hydration, recovery and optimized plant performance. Replicated Water Droplet Penetration assessments on an extremely hydrophobic sand has demonstrated that **HydroForce Recovery** provides faster movement of water into the soil than competitive products. Testing conducted by G-Censeo Research (Independent research organisation).

Treatment & Concentration	Replicate (WDPT* seconds)					Average
	1	2	3	4	5	
HydroForce Recovery 4000ppm	instant	instant	instant	instant	instant	0.00
Aquaforce 4000ppm	1	instant	1	1	1	0.80
MP Shield 4000ppm	1	1	1.5	0.5	instant	0.80
Untreated Control	141	46	166	241	245	167.8

*WDPT – Water droplet penetration time: Seconds required to penetrate a highly hydrophobic sand.

Excellent Re-wetting Performance

Use Rates

Situation	Rate per 100m ²	Rate per hectare	Comments
Localised Dry Spot Management	200mL	20L	Apply in no less than 400L/ha of water. Irrigation is not critical but is recommended to ensure rapid hydration of the profile. Repeat applications fortnightly and continue until plant recovery occurs.
Fairy Ring Management	250mL	25L	Apply HydroForce Recovery to assist in re-wetting hydrophobic areas caused by Fairy Ring fungi. For optimised performance with certain fungicides (tebuconazole), HydroForce Recovery should be applied prior to and post fungicide application.
