AccuBlu 120

GUARANTEED ANALYSIS

Total Nitrogen (N) 41.0%
41.0% Urea Nitrogen*

Derived From: Polymer coated urea

*41.0% Slow Release Nitrogen from polymer coated Urea.

Net Wt. 22.68 KG (50 lbs)

Product Code: F250306

Lot# C-

Mini Fairway Grade: SGN 145

Made in Canada

Manufactured & Guaranteed by:

Ferti Technologies

AccuBlu™

CONTROLLED RELEASE NITROGEN

AccuBlu™ is a patented, coated, controlled-release PCU nitrogen source designed to provide a reliable and predictable source of nitrogen over a specified length of time.

- Precise technology – A patented uniform curable sealant coated nitrogen source providing predictable release over a specified time period. Nutrient release from 45 to 240 days.
- Consistent release begins day one when in contact with soil solution, as compared to the leading PCU brand with a delay of up to 1-2 weeks before release.
- Superior technology – Uniform curable sealant coating allows for a metering of the nitrogen to the plant over the desired time frame as compared to the catastrophic release of SCU.
- Supports and exceeds the BMP recommendations and the 4R Nutrient Stewardship program – right source/right rate/right time/right place.
- Eliminates nitrogen leaching, volatilization and the risk of burning.
- Exceeds industry standards for coating resiliency assuring 100% of the durable coating is in tact at time of application.

How it works

Uniform curable sealant coating allows for a predictable metering of nitrogen to the plant over the desired time frame from 45 to 240 days.

Water enters prill through permeable layer.

Dissolved nitrogen released as determined by coating thickness, soil temperature and water.

Southern turf formulations
