

# AQUASPHERE<sup>®</sup> PRO

- Treats up to **500,000** gallons
- *Marine DEGRADABLE* sphere, easy to use!
- Provides a patented 30 day release technology for treatment of large ornamental fresh water ponds, golf courses & estate ponds, stock ponds & swimming holes, parks & recreational facilities
- Safe for all fish, pets, wildlife, people, and plants
- The natural alternative to chemical treatments

**Net Contents: 1 Aquasphere Pro**

10032.5A GHS version: 16110

## THE MARINE DEGRADABLE AquaSPHERE® PRO

The AquaSphere® PRO is designed to prevent poor water clarity, odor and floating or suspended organic matter by consuming the excess nutrients in the water for improved water quality and clarity.

AquaSphere® PRO contains a proprietary blend of naturally occurring bacteria and enzymes that reduce the organic debris that collect in water. There is no need to remove the sphere after 30 days because the outer shell of the AquaSphere PRO is made of a corn starch based material and will completely compost within your pond over time.

### WHAT TO EXPECT WITH THE AquaSPHERE® PRO

Correcting water problems naturally occurs with time and continued use. This product is safe for fish, animals, wildlife, people and plants. Every body of water is different, therefore results may vary. Some ponds will react more quickly than others due to their specific water conditions. The key to improved water quality is the monthly application of the all-natural bacteria and enzymes that are included in the patented, time-released AquaSphere® PRO. With continued use, you can expect improved water quality and clarity while eliminating odors.

### CALCULATE THE NUMBER OF SPHERES NEEDED

Calculate the total gallons in the pond or area to be treated:

*(Length x Width x Average Depth x 7.5 = Total Gallons)*

**Do not under treat water!** Over treating is safe for all fish and animals, and will yield optimal results. **If your pond is over 500,000 gallons use multiple spheres per 30 day period.**

### SIMPLOT WATERPACK PRODUCTS

For hard to treat ponds and lakes, Natural BLAST®, VISTA® and RUSH® can be used in conjunction with the AquaSphere® PRO for optimum results. To learn more visit us on line at [www.simplot.com](http://www.simplot.com).

**NOTE:** This is an all-natural system. It may require 4-6 weeks to achieve water quality improvement. For best results do not use chemicals in pond.

## AquaSphere® PRO Directions For Use

Use in self-contained ponds and retention areas.

1. Keep the AquaSphere® PRO dry until pond application.
2. Remove outer plastic bag and gently toss all contents into the ponds. **DO NOT OPEN THE SPHERE.** The inner bags are water soluble and will dissolve upon contact with water.
3. Deploy accurate number of sphere(s) every 30 days.
4. Sphere placement; evenly deploy sphere throughout the pond, if possible 10 feet from shoreline.
5. The AquaSphere® PRO works very well with all types of aeration. Whenever possible avoid placing spheres in the close proximity to aerators.
6. The sphere will sink to the bottom of the pond after 30 seconds of being deployed and begin to work instantly.
7. Treat water temperatures of 45°F - 110°F.

Once the AquaSphere PRO is submersed into the water it is important to not let the sphere dry out during treatment. The entire shell and all inner contents will compost in your pond over time. It is not necessary to remove the marine degradable sphere after the 30 days.

**For season-long care, follow up with the AquaSphere® PRO every 30 days while water temperatures are between 45°F - 110°F.**
