

RG3

CASE STUDY: THE BAYOU CLUB – LARGO, FL

QUALITY AND PRODUCTIVITY THAT MEASURES UP.

The Bayou Club in Largo, FL placed 4 RG3's into their daily operation in November of 2012, enabling them to achieve walk-mowed and rolled greens conditions with the same amount of labor as their daily triplex mowing operations. Members took notice and results in quality speak for themselves.

RG3 QUALITY IMPACT

- Consistent, smoother greens with an average increase in ball roll of 12 inches as compared to greens mowed previously by triplex only.
- Precise clean-up-cut maintained the greens true size and collar definition.
- Club members overwhelmingly rated the greens smoother, faster, and more consistent.

RG3 PRODUCTIVITY IMPACT

The RG3 has enabled the Bayou Club to achieve walk-mowed and rolled quality greens conditions with the same staff size as their triplex greens mowing operations. This represents a daily labor savings of 10 man-hours (\$35,000 annually) for what would otherwise be required to achieve the same greens conditions with walk-mowing and rolling.

"I've been impressed with the quality of my greens after being mowed with the RG3. Our members are experiencing higher green speeds, improved ball roll, and greater consistency between greens with the RG3." – Scott Mason, Superintendent, The Bayou Club
