MAREDO GT250 CountRo-Sweeper

- The brushes counter rotate, leaving a very clean result
- Ideal for removing cores, pine tree needles, dew etc.
- **MAREDO** heavy duty collecting boxes are standard included
- With the optional deflector plate the **GT250** heads can be used to brush in topdress material

The **GT250 CountRo-Sweeper** is standard provided with a heavy duty **MAREDO** collecting box. With an optional deflector plate the **GT250** is ideal to use for brushing in topdress material

Why use the **MAREDO GT250 CountRo-Sweeper**?

Cleaning greens can be a time consuming operation. Blowers are often needed to remove tree needles, redundant topdress sand, cores, worm piles or other debris. Most sweepers are not designed for use on greens as they are too aggressive or too heavy.

However **MAREDO** designed the **GT250 CountRo-Sweeper** specially for use on greens. A small gearbox lowers the RPM of the brushes and reverses the rotation direction. The lower RPM of the brushes results in a lower brush speed which prevents burned turf. Burned turf is a result of brushes with a too high RPM. The reverse rotation (rotation against driving direction) is the only right rotation direction for efficient brushing. The **MAREDO GT250** will remove incredible amounts of grass clippings, needles, leaves, worm piles etc. and will leave a clean and healthy green.

The working depth of the **GT250** is easy to change by turning the quick height adjusters
